DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

- I. A system as claimed wherein the monitored apparatus is an Uninterruptible power supply (UPS) see claims 11 and 16.
- II. A system as claimed wherein the monitored apparatus is a detection device selected from the group consisting of a smoke alarm, a burglar alarm, a fire detector, a water detector, or an unauthorized access detector see claims 12 and 17.

The species are independent or distinct because they have separate utility. A system as claimed could only monitor an apparatus that is a UPS and not monitor any apparatus that is a detection device. Alternatively, a system as claimed could only monitor an apparatus that is a detection device and not monitor any apparatus that is a UPS. See paragraph 17 of specification where the applicants describe how the claimed system can be used to monitor only UPS devices or only detection devices or both together. The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In one set of claims, the monitored apparatus is a UPS and in the others the monitored apparatus is a detection device. In addition, these species are not obvious variants of each other based on the current record.

Application/Control Number:

10/085,423 Art Unit: 2141

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph. In this case, the search for the species where the monitored apparatus is a detection device would require searching in class 340, particularly the subclasses related to Condition Responsive Indication Systems (500+) while the search for the species where the monitored apparatus is a UPS would not. The search for the species where the monitored apparatus is a UPS would require searching class 307, particularly the subclasses related to substitute or emergency (power) sources (subclasses 64 and 66), while the search for the species where the monitored apparatus is a detection device would not.

Applicant is advised that the reply to this requirement to be complete <u>must</u> include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected species, including any claims subsequently added. An argument that a

10/085,423 Art Unit: 2141

claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.

Conclusion

A shortened statutory period for response to this action is set to expire **one month (not less than 30 days)** from the mail date of this letter. Failure to respond within the period for response will result in **ABANDONMENT** of the application (see 35 U.S.C. 133, M.P.E.P. 710.02, 710.02(b)).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Grant Ford, whose telephone number is (571) 272-8630. The examiner can normally be reached on M-F from 9:00 a.m. to 5:30 p.m. EST.

If attempts to reach the examiner by phone fail, the examiner's supervisor, Andrew Caldwell, can be reached at (571) 272-3868.
